AURORA

DYNAMICS

COMPANY PROFILE | INDUSTRIAL ROBOTICS & AI AUTOMATION

Intelligent robotics for the modern factory floor

Aurora Dynamics designs collaborative robots and the AI software that orchestrates them, helping manufacturers raise throughput, cut defects and move people into higher-value work.

FOUNDED	HEADQUARTERS	EMPLOYEES	REVENUE FY2025	OWNERSHIP
2014	Pittsburgh, USA	1,850	$412M	Publicly listed

Hypothetical company created for illustrative purposes. Any resemblance to real organizations is coincidental.

Company Overview

Founded in 2014 by a team of university robotics researchers, Aurora Dynamics builds collaborative robots ("cobots"), machine-vision systems and the cloud software that coordinates them across a factory. Its platforms run in more than 1,200 facilities across automotive, electronics, food processing and consumer goods.

Aurora pairs affordable, easy-to-program hardware with a learning layer called AuroraMind, which turns production data into continuous improvements. Customers typically see payback in under 14 months, and net revenue retention has stayed above 118% as customers grow from a single work cell to full-line automation.

> ***Mission***
> *To make advanced automation accessible to every manufacturer, whatever its size.*

Core Values

Safety First
Every product is designed to work safely beside people, with no cages required.

Human + Machine
Automation should elevate the workforce, not replace it.

Open by Design
Standard interfaces so customers are never locked in.

Relentless Iteration
Software updates ship monthly; hardware improves every cycle.

Milestones

2014	Founded by three robotics researchers; first prototype arm demonstrated.
2016	Launch of the A1 cobot, the company's first commercial product.
2018	Series C funding; offices opened in Munich and Shenzhen.
2021	Initial public offering on a major US exchange.
2023	AuroraMind learning platform released to all customers.
2025	Passes 1,200 deployed sites; opens second assembly plant.

Products and Services

A-Series Cobots

Six-axis collaborative arms with payloads from 5 to 35 kg, programmed by demonstration in under an hour.

AuroraVision

3D machine-vision cameras for inspection, bin-picking and quality control at line speed.

AuroraMind Platform

Cloud analytics that learn from fleet data to tune cycle times and predict maintenance needs.

Aurora Care

Installation, training and 24/7 remote support packages, sold as a subscription.

Market Position

Aurora estimates its addressable market at $38 billion, growing roughly 11% a year as labor shortages and reshoring push manufacturers to automate. It competes with large industrial-robot incumbents and a growing field of software-first start-ups.

Competitive strengths

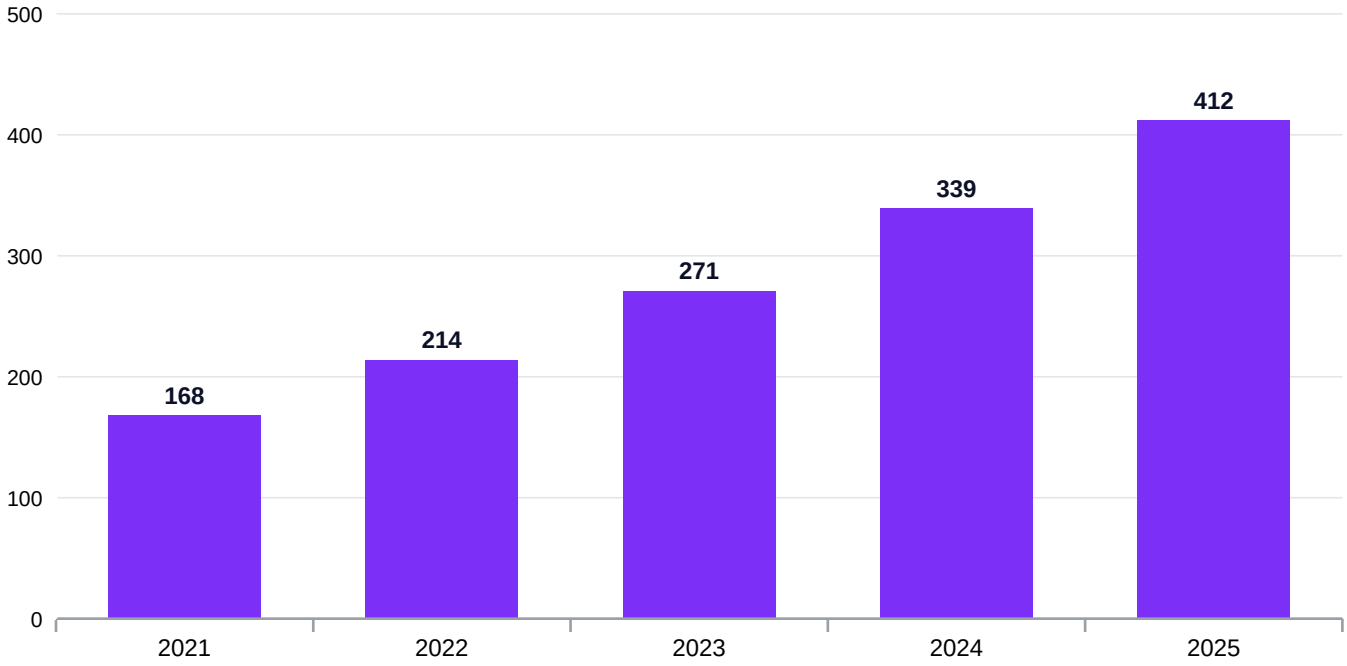

- Lower total cost of ownership than traditional industrial robots
- Fastest commissioning time in its class (average 3 days per cell)
- Software revenue now 31% of total, improving margins
- Strong customer base across 24 countries with 62% of revenue outside North America

Financial Snapshot

Figures in US$ millions, fiscal years ending December. All figures are hypothetical.

Fiscal year	Revenue ($M)	Growth	Operating margin	Net income ($M)
2021	168	-	6.1%	7.9
2022	214	27.4%	8.4%	14.6
2023	271	26.6%	10.2%	22.8
2024	339	25.1%	12.0%	33.1
2025	412	21.5%	13.5%	44.7

Revenue by fiscal year ($M)

Commentary

Revenue has compounded at roughly 25% a year since 2021 while operating margin has more than doubled, driven by a growing mix of recurring software and service income.

Leadership Team

Elena Markovic
Chief Executive Officer and Co-founder

Former university robotics lab director; leads strategy and product vision.

Daniel Okafor
Chief Financial Officer

Joined in 2019 after 15 years in industrial finance; led the 2021 listing.

Priya Raman
Chief Technology Officer

Architect of AuroraMind; holds 22 patents in robot learning.

Marcus Lindqvist
Chief Operating Officer

Runs manufacturing, supply chain and customer deployment worldwide.

Strategic Outlook

- Launch of the heavy-payload H-Series in 2026 to enter automotive body-shop applications.
- Expand AuroraMind into an app marketplace for third-party developers.
- Open a regional assembly and training center in Southeast Asia by 2027.
- Target operating margin of 18% by 2028 through software mix and scale.
